

- Install Power BI Desktop and share the final screenshot of the report view page which appears when power desktop starts.

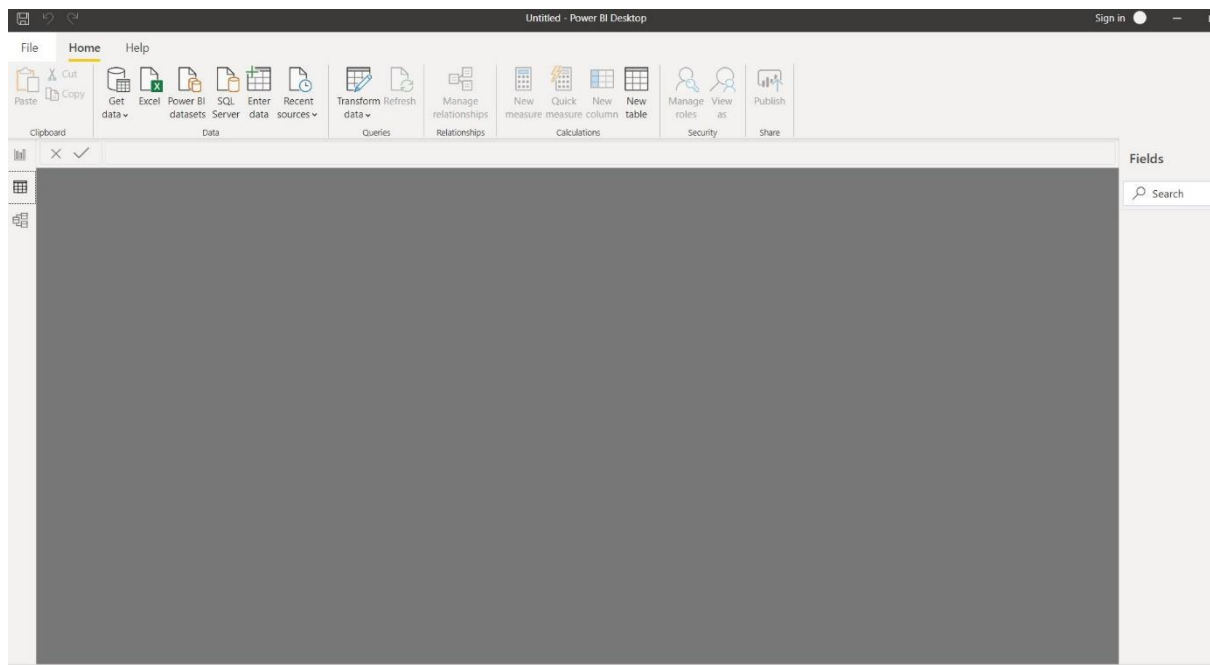

- Prepare a document and with the following screenshot

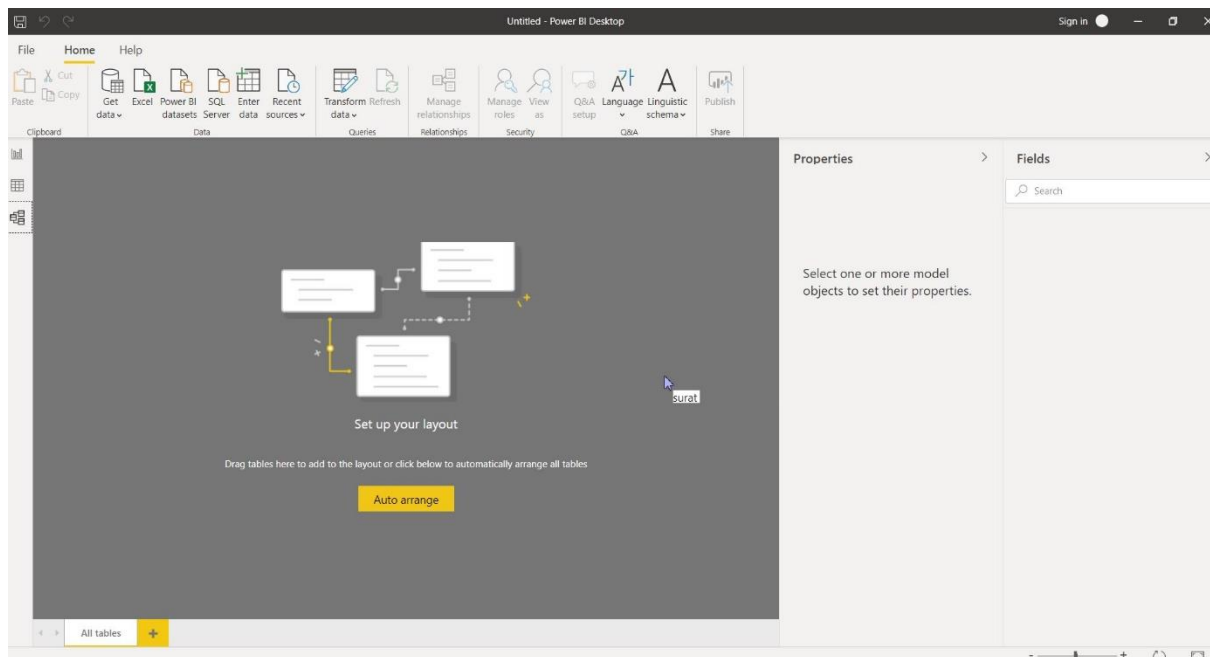

– Report View

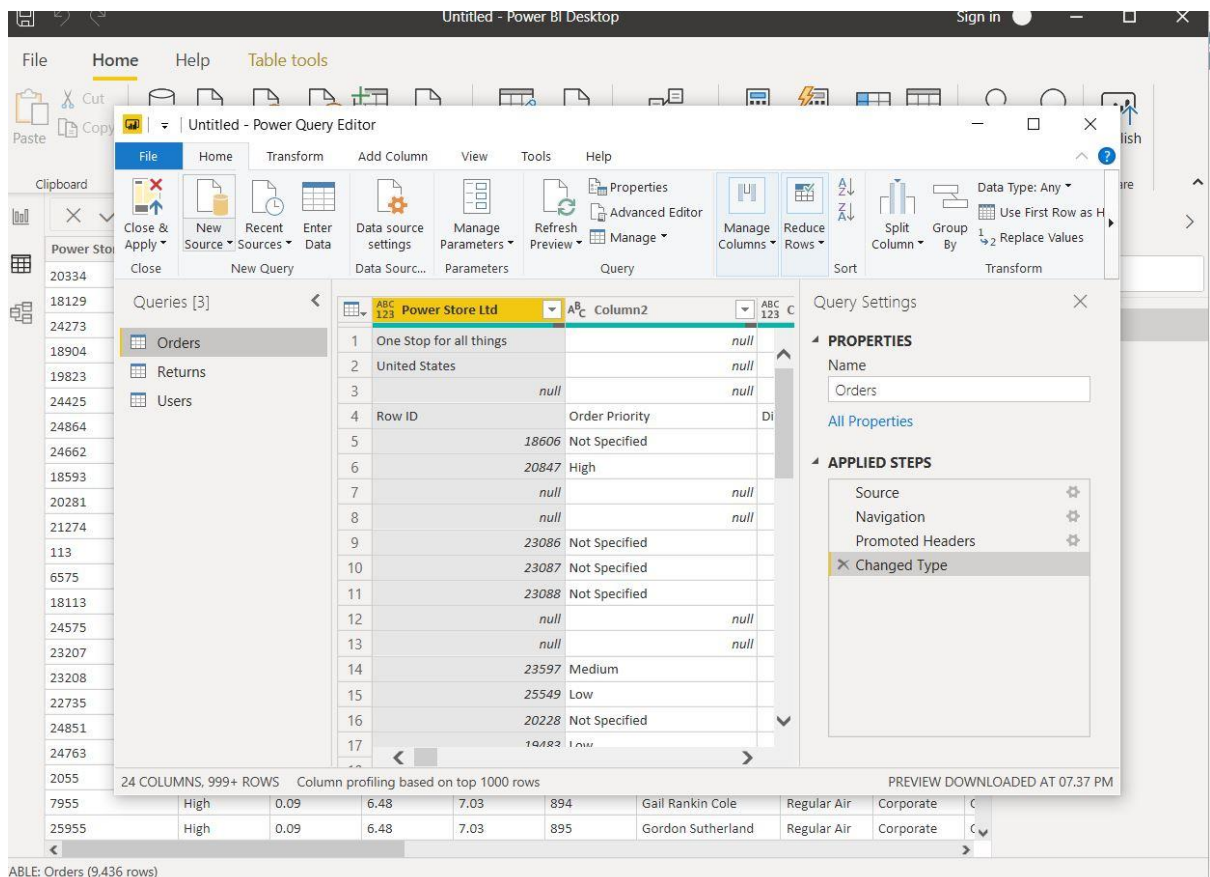

– Data View

– Model View

– Power Query Editor

– Advance Editor

The screenshot shows the Power Query Editor interface. The main window is the 'Advanced Editor' for a query named 'Orders'. The query is written in M language and performs the following steps:

- Source**: Loads an Excel workbook from 'C:\Users\Rover\Downloads\Store Sales Data.xlsx'.
- Orders_Sheet**: Extracts the 'Orders' sheet from the workbook.
- Promoted Headers**: Promotes the first row of the data to headers.
- Changed Type**: Changes the data type of the 'Power Store Ltd' column to 'any'.
- Removed Top Rows**: Skips the first 3 rows of the data.
- Promoted Headers1**: Promotes the first row of the remaining data to headers.
- Changed Type1**: Changes the data type of the 'Row ID' column to 'Int64.Type'.
- Removed Blank Rows**: Selects rows where the 'Unit Price' column is not empty.
- Rounded Off**: Rounds the 'Unit Price' column to 0 decimal places.

The query is enclosed in a `let` block, with the final result assigned to a variable in the `in` block.

```
let
    Source = Excel.Workbook(File.Contents("C:\Users\Rover\Downloads\Store Sales Data.xlsx"), null, true),
    Orders_Sheet = Source{[Item="Orders",Kind="Sheet"]}[Data],
    #"Promoted Headers" = Table.PromoteHeaders(Orders_Sheet, [PromoteAllScalars=true]),
    #"Changed Type" = Table.TransformColumnTypes(#"Promoted Headers",{{"Power Store Ltd", type any}}, {"Colu...
    #"Removed Top Rows" = Table.Skip(#"Changed Type",3),
    #"Promoted Headers1" = Table.PromoteHeaders(#"Removed Top Rows", [PromoteAllScalars=true]),
    #"Changed Type1" = Table.TransformColumnTypes(#"Promoted Headers1",{{"Row ID", Int64.Type}, {"Order Pri...
    #"Removed Blank Rows" = Table.SelectRows(#"Changed Type1", each not List.IsEmpty(List.RemoveMatchingIt...
    #"Rounded Off" = Table.TransformColumns(#"Removed Blank Rows",{{"Unit Price", each Number.Round(_, 0),
in
    #"Rounded Off"
```

At the bottom of the editor, a green checkmark indicates: "No syntax errors have been detected." Buttons for 'Done' and 'Cancel' are located at the bottom right.

- Prepare a document with details of the following along with their price

– Power BI Desktop:

Connect to your data, wherever it is

Access data from hundreds of supported on-premises and cloud-based sources, such as Dynamics 365, Salesforce, Azure SQL DB, Excel, and SharePoint. Ensure it's always up to date with automated, incremental refreshes. Power BI Desktop enables you to develop deep, actionable insights for a broad range of scenarios.

Prep and model your data with ease

Save time and make data prep easier with data modeling tools. Reclaim hours in your day using the self-service Power Query experience familiar to millions of Excel users. Ingest, transform, integrate, and enrich data in Power BI.

Provide advanced analytics with the familiarity of Office

Dig deeper into data and find patterns you may have otherwise missed that lead to actionable insights. Use features like quick measures, grouping, forecasting, and clustering. Give advanced users full control over their model using powerful DAX formula language. If you're familiar with Office, you'll feel at home in Power BI.

Pricing: FREE
